

Yes, I can help you. It is interesting that sometimes people get bogged down in minor detail and miss seeing the big picture; let me use an analogy, there is a race car that has been run in 18 races, performed flawlessly, and then you have someone asking if the person that put together the engine had the right tools! if the results of the races were unacceptable, then the question is relevant, but if the car is working well? We have 18 published clinical research trials that show the benefits that Juice Plus+® can produce at the blood level, which obviously show the capsules contain valuable nutrients. That is the best proof that we are using adequate raw materials (and that includes the right soil!), and an adequate process.

Best regards,

Carlos F. Madero, Ph.D.

Director, Technical Support

NSA, the maker of Juice Plus+®

140 Crescent Drive

Collierville, TN 38017

Dr. Madero,

I had a customer ask me the other day if the soil is tested or crops rotated when growing the fruits & vegetables for Juice Plus. She was impressed with all of the testing for herbicides/pesticides but wondered about the nutrients in the soil. This isn't the first time that I have had this question, especially from farmers. Can you help us?

Carol
